

# Watermark Verification System

---

**Muhammad Uzair Bin Arshad**

*NON-TECHNICAL DOCUMENT*

## The Problem

---

- Watermark on every document that is sent
- No one should be able to delete/change watermark
- System must track every action performed on the document
- If someone else is using someone else's laptop and he sends document system must give his signature not owner's

## Solution

---

- A software that runs as OS protected service
- Starts when system boots and ends when system is shut down.
- Software applies a signature to every document sent, signature includes name, email.
- Software makes log of every action performed on every document. Action such as edited, deleted, sent to whom, received from whom, printed etc.
- If user tries to delete watermark, or close the software, the software will instantly send a report to Admin, and lock user's laptop.
- To protect from ai, software can implement 2 types of watermark, 1 on document that displays name, mail etc. And another signature that will be encrypted (protected) that signature will include user's id.
- Similarly if document watermark is removed by ai the
